## **IN THE CLAIMS**:

1. (Currently Amended) A method for notifying a voice message reception to a terminal eapable of adapted for receiving an E-mail when a message is received in a voice mail system, the method comprising the steps of:

switching a caller attempting to contact a user of a mobile telephone by a mobile switching center (MSC) to a voice mail system after determining that the user of the mobile telephone is not answering the caller;

storing at least one of a voice message and a text message for the mobile telephone user by
the voice mail system, said at least one of a voice message and text message received at the voice
mail system via the (MSC)received at the voice mail system;

transmitting the <u>at least one of a</u> voice message <u>and text message</u> and information related to the voice message to a mail server according to a previously registered E-mail address <u>that correlates to the</u> mobile telephone user; and

transmitting the voice message and the information related to the voice message to the terminal eapable of adapted for receiving an E-mail according to the E-mail address registered in the mail server;

wherein the information related to the voice message is included in a message part of the E-mail and the voice message is attached to the E-mail in the form of a file, when transmitting the voice message and the information related to the voice message to the mail server.

- 2. (Currently Amended) The method as claimed in claim 1, further comprising the step of reproducing the received voice message in the terminal enpable of adapted for receiving an E-mail by executing the file attached to the E-mail, when the terminal capable of receiving an E-mail receives the voice message and the information related to the voice message.
- 3. (Currently Amended) A method for notifying a voice message reception to a terminal **enpable of adapted for** receiving an **E-mail** when a message is received in a voice mail system, the method comprising the steps of:

registering an E-mail address <u>that correlates to a particular mobile telephone user</u> in the voice mail system <u>by entering information</u> using a telephone;

switching center (MSC) has determined that the mobile telephone was not answering the caller, wherein the caller is forwarded to a voice mail system via the (MSC) to record the voice message;

determining whether an E-mail notification function is set;

transmitting the voice message and information related to the voice message to an E-mail server according to a registered E-mail address, when the E-mail notification function is set; and

transmitting the voice message and the information related to the voice message to the terminal eapable of adapted for receiving an E-mail according to the registered E-mail address;

wherein the information related to the voice message is included in a message part of the E-mail and the voice message is attached to the E-mail in the form of a file, when transmitting the voice message and the information related to the voice message to the mail server.

- 4. (Currently Amended) The method as claimed in claim 3, further comprising the step of reproducing the received voice message in the terminal eapable of adapted for receiving an E-mail by executing the file attached to the E-mail, when the terminal eapable of adapted for receiving an E-mail receives the voice message and the information related to the voice message.
- 5. (Original) The method as claimed in claim 4, further comprising the steps of: after storing the received voice message, determining whether an SMS (Short Message Service) function is set; and

notifying the terminal of message reception when the SMS function is set.

- 6. (Original) The method as claimed in claim 1, wherein the information related to the voice message includes date and time when the voice message is received, a phone number of a person who has left the voice message, and the total number of the voice messages stored in the voice mail system.
- 7. (Original) The method as claimed in claim 2, wherein the information related to the voice message includes date and time when the voice message is received, a phone number of a person who has left the voice message, and the total number of the voice messages stored in the voice mail system.
- 8. (Currently Amended) The method as claimed in claim 1, wherein the terminal eapable of adapted for of receiving an E-mail is a personal computer.
- 9. (Currently Amended) The method as claimed in claim 2, wherein the terminal eapable of adapted for of receiving an E-mail is comprises a personal computer.

- 10. (Currently Amended) The method as claimed in claim 3, wherein the terminal eapable of adapted for receiving an E-mail is comprises a personal computer.
- 11. (Currently Amended) The method as claimed in claim 1, wherein the terminal eapable of adapted for receiving an E-mail is a Personal Digital Assistant (PDA).
- 12. (Currently Amended) The method as claimed in claim 2, wherein the terminal eapable of adapted for receiving an E-mail is a Personal Digital Assistant (PDA).
- 13. (Currently Amended) The method as claimed in claim 3, wherein the terminal eapable of adapted for receiving an E-mail is a Personal Digital Assistant (PDA).
- 14. (Currently Amended) The method as claimed in claim 1, wherein the terminal capable of adapted for receiving an E-mail is a mobile phone which can support that supports a radio data communication service.
- 15. (Currently Amended) The method as claimed in claim 2, wherein the terminal eapable of adapted for receiving an E-mail is a mobile phone which can support that supports a radio data communication service.

- 16. (Currently Amended) The method as claimed in claim 3, wherein the terminal eapable of adapted for receiving an E-mail is a mobile phone which can support that supports a radio data communication service.
- 17. (Original) The method as claimed in claim 3, wherein the E-mail address is registered in the voice mail system by recognizing a voice of the user.
- 18. (Original) The method as claimed in claim 3, wherein the information related to the voice message includes date and time when the voice message is received, a phone number of a person who has left the voice message, and the total number of the voice messages stored in the voice mail system.
- 19. (Original) The method as claimed in claim 4, wherein the information related to the voice message includes date and time when the voice message is received, a phone number of a person who has left the voice message, and the total number of the voice messages stored in the voice mail system.
